

Clinical Specialist - Intraoperative Neuromonitoring

Salary range: £30k-£40k plus an estimated 40% bonus scheme.

Permanent Full-time (part-time may be considered)

About the Company:

Leading Intraoperative Neuromonitoring Services company based in London is looking for experienced Clinical Specialists to provide clinical services. The company has a dedicated team of specialists in neuromonitoring to provide a high standard of medical services for spinal, vascular, brain, and other surgeries. We are committed to delivering the highest level of patient care and surgeon satisfaction. Our philosophy is to work with integrity, accuracy, and precision, making patient safety the gold standard in healthcare.

About the Role:

As a **Clinical Specialist** you will be responsible for the monitoring of the patient's neuro system by performing intraoperative Neuromonitoring during a wide variety of neurological surgeries, such as neuro, spine and orthopaedic, vascular, cardiothoracic, and others. You will supervise the surgical cases in the operating theatres throughout the entire duration of the procedures, in addition to pre- and post-operative duties.

The candidates will be responsible for providing services primarily in and around the location of residence and will be required to travel nationally when necessary. The preferred locations of residence are **Edinburgh, Manchester, Birmingham, Coventry, and Brighton**. The successful candidates will receive internal company training.

Duties include, but are not limited to:

- Perform a range of intraoperative neurophysiological monitoring techniques for the full variety of surgeries, including the application in the spinal, supratentorial, and brainstem.
- Perform and interpret a range of intraoperative investigations to a high level of competence.
- Produce clinical reports.
- Liaise with consultants and other members of the multidisciplinary team.

Requirements for the Role:

- A Master's or Doctorate Degree in a scientific discipline. Neuroscience disciplines are desirable but not mandatory.
- Two years of experience are required. Applicants with less or no experience will be considered for the Clinical Specialist Trainee position.
- Ability to travel.
- Fluent in English.

Essential:

- Excellent communication skills.
- Ability to adapt and succeed in a highly skilled clinical environment.
- Focus on clinical quality and deliver the best results for patients.
- Proactive individual who works well independently and as part of the team.
- Eager to learn and continuously improve their knowledge and skills.

Preferred:

- Previous experience in neurophysiologic techniques such as TMS, NCS, EMG, and EEG.
- Previous research experience.
- Driving license

Additional Benefits Include:

- Private healthcare insurance
- Pension scheme
- Visa sponsorship available
- Sick pay
- Full training is provided
- On-going development
